DECLARATION

I, Beauty Sangweni, declare that this report is my own work. It is being submitted for the degree of Master of Science in Nursing at the University of the Witwatersrand, Johannesburg. It has not been submitted before for any degree or examination at this or any other University.

DEDICATION

This report is dedicated with love and gratitude to my mother, Mary Lethatlhe, for being there all the time, and to my children. May God bless them
ABSTRACT

Introduction: Registered nurses (RNs) are becoming increasingly dissatisfied with factors in the workplace; monthly resignations are related to organizational management issues, diminishing resources, staff shortage, increasing responsibilities and lack of support.

The purpose of this study: This research sought to determine the relationship between burnout and job satisfaction among registered nurses at a hospital in the city of Johannesburg.

The methodology: A quantitative descriptive survey was used as study design. The Job Satisfaction scale of Warr et al (1979) was used to measure overall satisfaction with both extrinsic and intrinsic factors. The Maslach Burnout Inventory-Human Service Survey (MBI-HSS) was used to measure emotional exhaustion; depersonalization and personal accomplishment. The sample comprised 165 RNs, who met the inclusion criteria and who agreed to participate.

Results: The RNs reported dissatisfaction with selected extrinsic factors in their work environment, such as the physical work condition, the way their institution is managed and the rate of pay. The RNs at this hospital are satisfied with hours of work, their immediate boss, their fellow workers and job security; they are dissatisfied with intrinsic factors of their job such as promotion opportunities and recognition. The majority (75.76%) of RNs reported moderate to high emotional exhaustion. There is a significant relationship between emotional exhaustion and job satisfaction factors. The results show a significant relationship between emotional exhaustion and depersonalization; 68.48% of RNs reported moderate depersonalization. There is a significant relationship between depersonalization and extrinsic factors. The majority of RNs (76.97%) reported high levels of personal accomplishment.
ACKNOWLEDGEMENTS

I would like to thank Professor Judy Bruce my research supervisor and mentor for always encouraging me to go the extra mile and not to lose hope.

- Special thanks to Dr Gayle Langley, for counseling and supporting me when I wanted to terminate the course.

- The nursing education team at the University of the Witwatersrand for their support and caring.

- Mrs. Ramothello, for her valuable ideas and thoughts.

- My colleagues for their support and encouragement.

- The management of the health institution at which I am based, for allowing me to do this study.

- Finally, I would like to acknowledge and thank Mr. Paul Nesara from the Epidemiology Data Center at Wits University for his assistance in the statistical part of my research.

## CHAPTER ONE-ORIENTATION OF THE STUDY

1 Introduction 1

1.2 Background 2

1.3 Rationale for the study 4

1.4 Statement of the problem 4

1.5 Purpose of the research 5

1.6 Objectives of the study 5

1.7 Definitions of terms 5

1.8 Significance of the study 6

1.9 Summary 7
CHAPTER TWO- LITERATURE REVIEW

2.1 Introduction
2.2 Overview of the literature
2.3 Theoretical framework
  2.3.1 Herzberg’s theory
  2.3.2 The Maslach Burnout Inventory
    2.3.2.1 Emotional Exhaustion subscale
    2.3.2.2 Depersonalization
    2.3.2.3 Personal Accomplishment subscale
2.4 Conclusion

CHAPTER THREE- RESEARCH METHODOLOGY

3.1 Introduction
3.2 Research design
3.3 The research setting
3.4 Research methods
  3.4.1 Population, sample and sampling method
  3.4.2 Data collection and research instruments
    3.4.2.1 Job satisfaction scale
    3.4.2.2 Maslach Burnout Inventory
    3.4.2.3 Reliability and validity of instruments
      3.4.2.3.1 Job satisfaction scale
      3.4.2.3.2 Maslach Burnout Inventory
3.5 The pilot study
3.6 Approach to data analysis
3.7 Ethical considerations
3.8 Conclusion

CHAPTER FOUR - RESULTS OF THE STUDY
4.1 Introduction
4.2 Approach to data analysis
4.3 Results
4.3.1 Demographic data
4.3.1.1 Gender
4.3.1.2 Age
4.3.1.3 Years of work experience
4.3.1.4 Job grade
4.3.2 Job Satisfaction
4.3.2.1 Extrinsic job satisfaction variables
4.3.2.1.1 Overall satisfaction with extrinsic factors
4.3.2.1.2 Satisfaction with specific extrinsic factors
4.3.2.1.3 Association between age and extrinsic factors
4.3.2.1.4 Association between years of work experience and extrinsic job satisfaction
4.3.2.1.5 Comparison between job grade and extrinsic job satisfaction variables
4.3.2.2 Intrinsic job satisfaction variables

4.3.2.2.1 Overall satisfaction with intrinsic factors

4.3.2.2.2 Satisfaction with specific intrinsic factors

4.3.2.2.3 Association between age and intrinsic factors

4.3.2.2.4 Association between years of experience and intrinsic job satisfaction

4.3.2.2.5 Association between job grade and intrinsic job satisfaction

4.3.3 The Maslach Burnout Inventory

4.3.3.1 Emotional exhaustion (EE) subscale

4.3.3.1.2 Association between emotional exhaustion and extrinsic factors

4.3.3.1.3 Association between emotional exhaustion and intrinsic factors

4.3.3.1.4 Association between age and emotional exhaustion

4.3.3.1.5 Association between emotional exhaustion and job grade

4.3.3.1.6 Association between emotional exhaustion and depersonalization

4.3.3.2 Depersonalization (Dp) subscale

4.3.3.2.1 Association between depersonalization and extrinsic job satisfaction factors

4.3.3.2.2 Association between depersonalization and intrinsic factors
job satisfaction factors

4.3.3.2.3 Association between age and depersonalization 59
4.3.3.2.4 Association between depersonalization and job grade 61
4.3.3.3 Personal Accomplishment subscale (PA) 62
4.3.3.3.1 Relationship between personal accomplishment and extrinsic job satisfaction 63
4.3.3.3.2 Association between PA and intrinsic job satisfaction factors 64
4.3.3.3.3 Association between age and personal accomplishment 67
4.3.3.3.4 Association between personal accomplishment and job grade 69
4.4 Conclusion 69

CHAPTER FIVE- DISCUSSION, CONCLUSION, RECOMMENDATION AND LIMITATIONS 71

5.1 Introduction 71
5.2 Discussion of results 71
5.2.1 Sample demography 72
5.2.2 Job satisfaction of registered nurses 73
5.2.3 Association between extrinsic and intrinsic job satisfaction factors and emotional exhaustion 76
5.2.4 Level of emotional exhaustion 77
5.2.5 Association between emotional exhaustion and depersonalization 77
5.2.6 Level of depersonalization among registered nurses 78
5.2.7 Association between depersonalization and extrinsic and intrinsic job satisfaction factors 78
5.2.8 Level of personal accomplishment of registered nurses 79
5.3 Conclusion drawn 79
5.4 Recommendation 81
5.4.1 Nursing management 81
5.4.2 Department of Health 82
5.4.3 Further research 82
5.5 Limitations 82
5.6 Conclusion 83
